

Leukemia Detection AI Report

Automated AI Prediction Report

Report ID:	0149F2A9	Date / Time:	2026-07-10 21:07:06
Patient ID:	N/A	Model:	DenseNet-Leukemia

Prediction Result

Predicted Class	Confidence Score	Heatmap Regions Flagged
Acute Myeloid Leukemia (AML)	45.3%	2

Grad-CAM Heatmap Visualization

Red boxes indicate regions of high model attention (Grad-CAM), flagged using the model's gradient-based activation map.

AI-Generated Summary

The model suggests that the image is consistent with Acute Myeloid Leukemia (AML) with a confidence score of 45.3%, which is considered low-confidence and should be treated as inconclusive pending further review. The Grad-CAM heatmap highlighted 2 regions of high model attention, indicating areas that the model deemed important for its prediction. However, this finding does not necessarily imply a specific diagnosis and should be interpreted with caution. The presence of these highlighted regions may be consistent with various conditions, and further evaluation is necessary to determine their significance. This result should be reviewed and confirmed by a qualified hematologist/oncologist to ensure accurate interpretation and diagnosis. This summary is an AI-generated report requiring confirmation by a qualified hematologist/oncologist.
