

Leukemia Detection AI Report

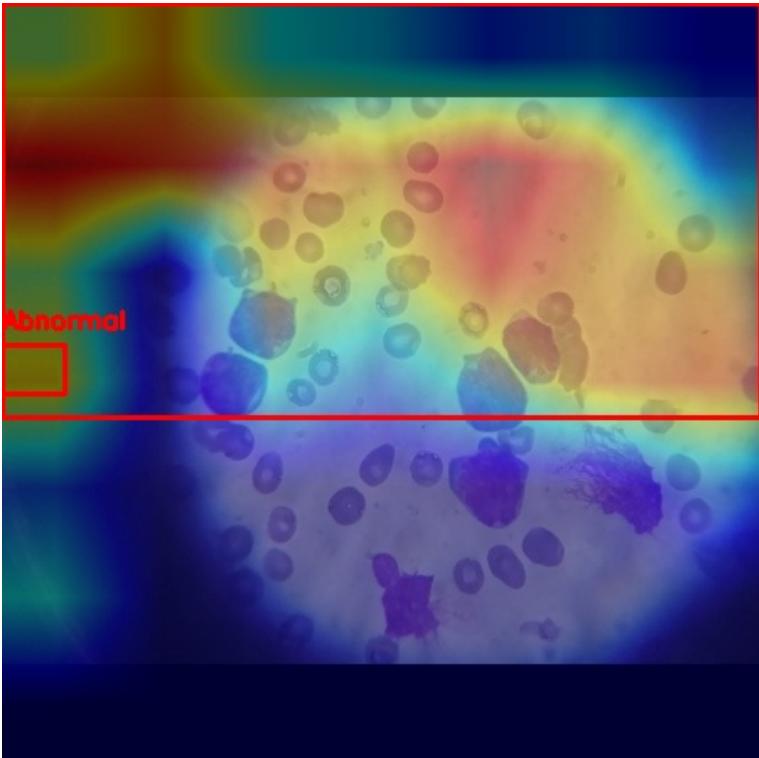

Automated AI Prediction Report

Report ID:	7B0C4C54	Date / Time:	2026-07-10 20:11:58
Patient ID:	N/A	Model:	DenseNet-Leukemia

Prediction Result

Predicted Class	Confidence Score	Heatmap Regions Flagged
Acute Myeloid Leukemia (AML)	39.9%	2

Grad-CAM Heatmap Visualization

Red boxes indicate regions of high model attention (Grad-CAM), flagged using the model's gradient-based activation map.

AI-Generated Summary

The model suggests that the image is consistent with Acute Myeloid Leukemia (AML) with a confidence score of 39.9%. However, due to the low confidence score, this result is considered low-confidence and should be treated as inconclusive pending further review. The Grad-CAM heatmap highlighted 2 regions of high model attention, which may indicate areas of interest, but this does not necessarily imply a specific diagnosis. The presence of these highlighted regions is consistent with the model's prediction, but further evaluation is necessary to determine their significance. This result should be interpreted with caution and is not sufficient to support a definitive diagnosis. This is an AI-generated summary requiring confirmation by a qualified hematologist/oncologist.

Disclaimer

DISCLAIMER: This report is generated by an artificial intelligence system and is intended for research and informational support purposes only. It is NOT a substitute for professional medical diagnosis, advice, or treatment. All results, including the predicted class, confidence score, and Grad-CAM visualization, must be reviewed and confirmed by a qualified, licensed hematologist or oncologist before any clinical decision is made. The model's predictions may contain errors, including false positives and false negatives, and are not a clinical diagnosis.
